

Pea *Protein* *Starch* *Fibre*

Peas and other pulses have long been a staple part of a wide variety of animal diets due to an excellent nutrient profile, rich in protein, carbohydrates and digestible fibre.

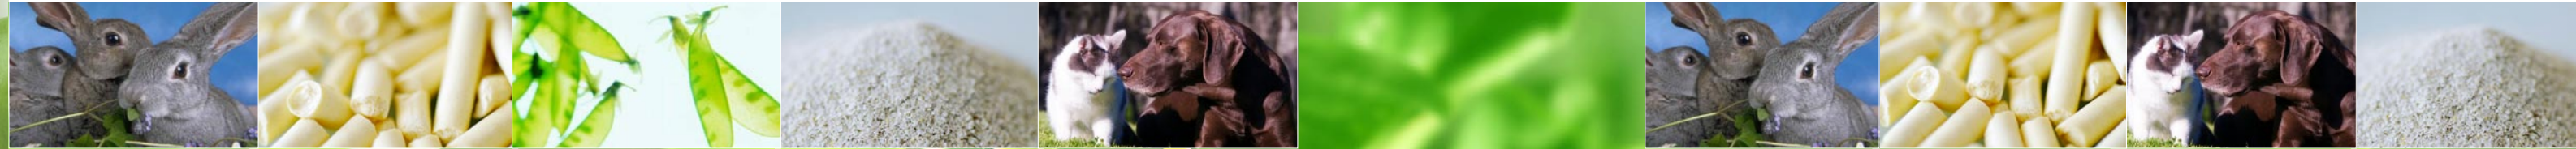

Gentle production methods retain the nutritional benefits of these products, enabling their free use in everything from snacks to complete foods.

Pea products also provide quality alternatives to allergy-prone cereals.

In addition to their nutritional features, pea products have a number of functional properties, such as a high moisture-binding capacity, bringing benefit to the animal and food producer alike.

- *Gluten-free and non-GM*
- *Highly digestible*
- *Excellent palatability*
- *Nutritionally balanced*
- *Naturally safe and sustainable*
- *Very low allergen potential*

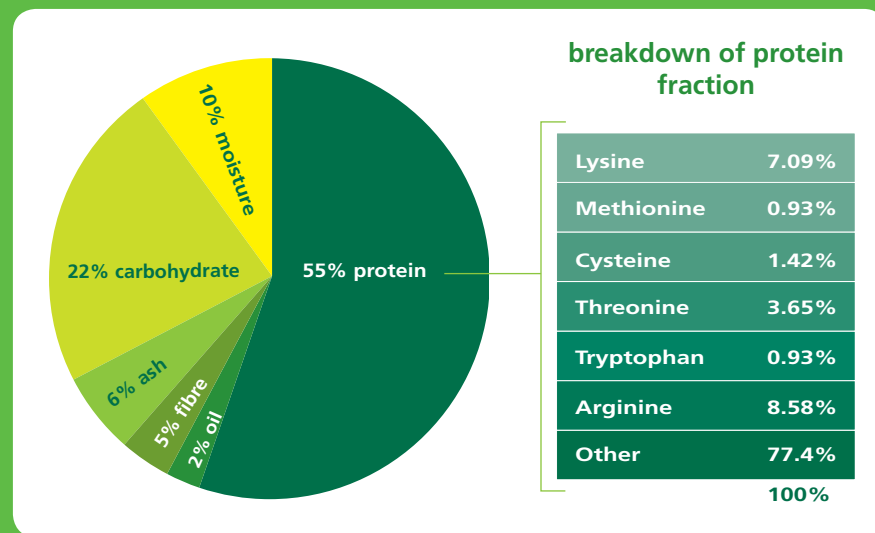

Put the 'P' back into pet food !

Ingredients as nature intended

Pea Protein

Pea Protein provides a natural, healthy and hypo-allergenic protein source for all companion animals. Since it has an excellent amino acid profile and low ash content, it can be used as partial or total substitute for soya and meat meals in most diets.

Recommended Usage: Can be used freely as a partial or total protein source for all companion animal formulations.

- **Highly digestible protein ingredient**
- **Excellent amino acid balance**
- **Suitable substitute for soya, fish and other meat meals.**
- **Non – GM**

Product Format

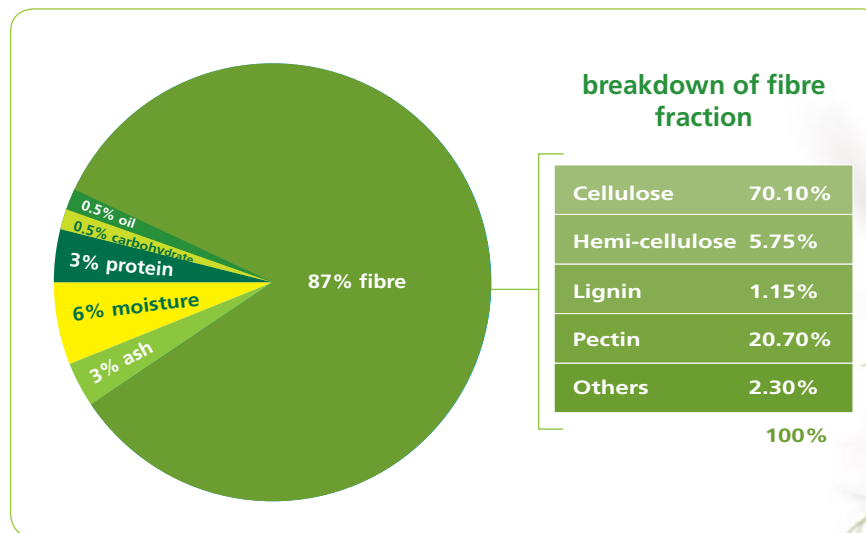

A fine, free-flowing flour OR 5mm pellets

Available in Big Bag (Totes) OR in Bulk

Pea Fibre

Pea Fibre provides a pure and natural source of dietary fibre that promotes the growth of healthy gut bacteria and regulates digestive passage. Also, due to its exceptional water-binding capacity and low energy content, it is an excellent ingredient in low energy diets to promote satiety.

Recommended Usage: Dogs and cats: 0.5 – 5.0%
Small Animals: 0.5 – 10.0%

- **Excellent functional properties**
- **Pre-biotic**
- **Mycotoxin binder**
- **Very low energy**
- **Non-GM**

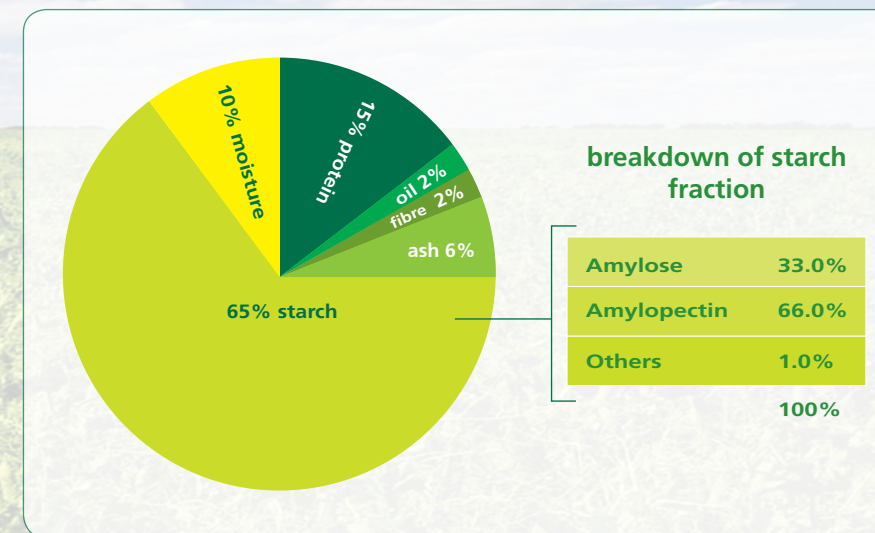

Product Format

Granular free-flowing powder
10kg bags OR Big Bags (Totes)

Pea Starch

Pea Starch is a natural gluten-free carbohydrate that is easily cooked by extrusion and sterilisation due to its low gelatinisation temperature. Although extremely digestible, the starch granules are slowly digested providing sustained energy release and hence has a low glycaemic index. Pea starch can be used as a partial or total source of carbohydrate in the diet and has excellent palatability and processing properties.

Recommended Usage: Can be used as a partial or total carbohydrate source

- **Low GI**
- **Highly digestible**
- **Low gelatinisation temperature, therefore easy to cook**
- **Gluten-free**
- **Non-GM**

Product Format

A fine, free-flowing flour OR 5mm pellets

Available in Big Bag (Totes) OR in Bulk
